MELAKUKAN FILE UPLOAD

Membuat Create, Read, Update, Delete Form file upload dan membuat detail produk.

A. Create

1. Screenshot hasil:

2. Script:

a. Upload_form.blade.php

```
<div class="col-md-12">
    <h4><a href="{{url('/produk')}}" class="btn btn-success">Data Produk</a> Form Upload Produk</h4>
    <br>
    <hr>
    <form action="{{url('/upload/action')}}" method="post" enctype="multipart/form-data">
        <input type="hidden" name="_token" value="{{csrf_token()}}">

        <div class="form-group">
            <label class="font-weight-bold">Foto Produk</label><br>
            <input type="file" name="file">
        </div>

        <div class="form-group">
            <label class="font-weight-bold">Deskripsi Produk</label>
            <textarea rows="5" name="deskripsi" class="form-control"
                placeholder="Tulis deskripsi produk disini"></textarea><br>
        </div>

        <input type="submit" value="Upload" class="btn btn-primary">
    </form>
</div>
```

b. ProdukController.php

```

public function uploadForm(){
    $data['title'] = "Upload Form - laracms";
    $data['produk'] = DB::select("SELECT * FROM t_produk");
    return view ('upload_form', $data);
}

public function uploadAction(Request $request) {
    $method = $request->method();
    if ($method == "POST") {
        $directory = 'assets/produk';
        $file = $request->file('file');
        $file->move($directory, $file->getClientOriginalName());

        DB::insert("INSERT INTO t_produk (foto,deskripsi) VALUES (?, ?)",
        [[$directory."/". $file->getClientOriginalName(),$request->input('deskripsi')]]);
        return redirect('/upload/form');
    }else {
        return redirect('/upload/form');
    }
}
}

```

c. Route

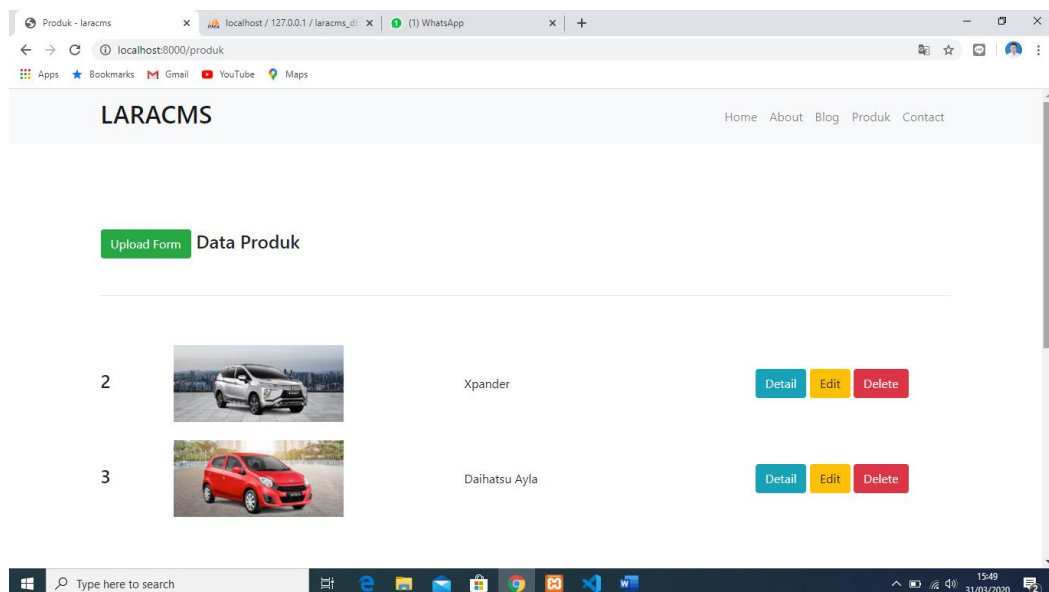

```

Route::get('/upload/form', 'ProdukController@uploadForm');
Route::post('/upload/action', 'ProdukController@uploadAction');

```

B. Read

1. Screenshot hasil:

2. Script:

a. Produk_index.blade.php

```

<div class="container mt-5">
  <div class="row">
    @foreach($produk as $p)

      <div class="col-md-12">
        <div class="row align-items-center" style="min-height: 50px;">
          <div class="col-md-1"><h4>{{ $p->id }}</h4></div>
          <div class="col-md-4"></div>
          <div class="col-md-4"><p class="m-0">{{ $p->deskripsi }}</p></div>
          <div class="col-md-3"><p class="m-0">
            <a class="btn btn-info" href="{{ url('/produk/detail/' . $p->id) }}">Detail</a>
            <a class="btn btn-warning" href="{{ url('/produk/edit/' . $p->id) }}">Edit</a>
            <a class="btn btn-danger" href="{{ url('/produk/delete/' . $p->id) }}">Delete</a>
          </div>
        </div><br>
      </div>
    @endforeach
  </div>
</div>

```

b. ProdukController.php

```

public function index(){
    $data['title'] = "Produk - laracms";
    $data['produk'] = DB::select("SELECT * FROM t_produk");
    return view ('produk_index', $data);
}

```

c. Route

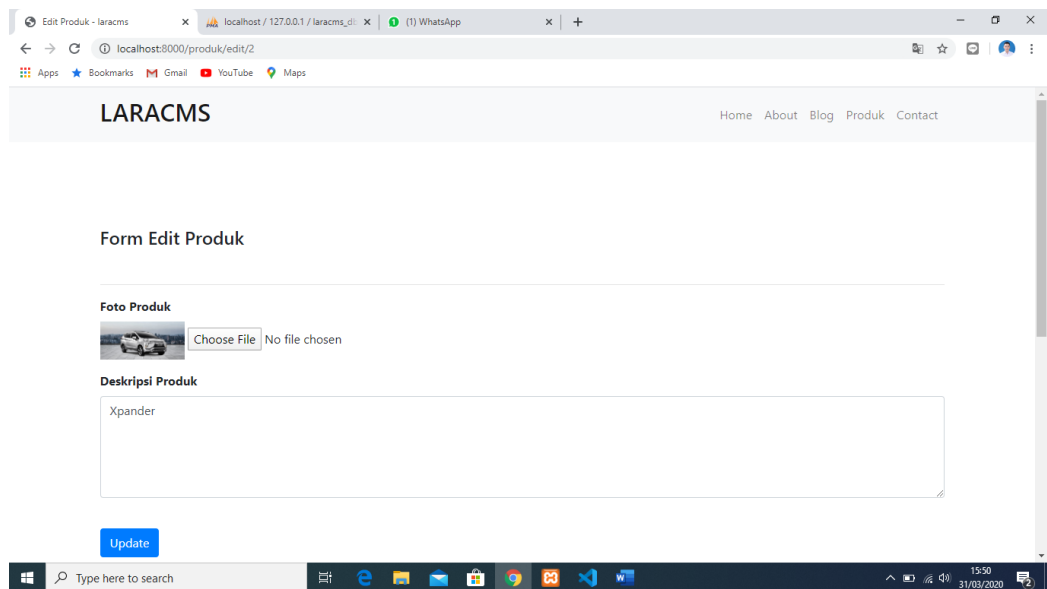

```

Route::get('/produk', 'ProdukController@index');

```

C. Update

1. Screenshot hasil:

2. Script:

a. Produk_edit.blade.php

```

<form action="{{url('/produk/edit/save')}}" method="post" enctype="multipart/form-data">
  <input type="hidden" name="_token" value="{{csrf_token()}}">
  <input type="hidden" name="id" value="{{ $produk->id }}" class="form-control" placeholder="ID">

  <div class="form-group">
    <label class="font-weight-bold">Foto Produk</label><br>
    
    <input type="file" name="file">
  </div>

  <div class="form-group">
    <label class="font-weight-bold">Deskripsi Produk</label><br>
    <textarea rows="5" name="deskripsi" class="form-control" placeholder="Tulis Deskripsi">
    [{{ $produk->deskripsi }}]</textarea><br>
  </div>

  <input type="submit" value="Update" class="btn btn-primary">
</form>

```

b. ProdukController.php

```

public function produkEdit($id) {
    $data['produk'] = DB::selectOne("SELECT * FROM t_produk WHERE id=?",
    [$id]);
    $data['title'] = "Edit Produk - laracms";
    return view('produk_edit', $data);
}

public function produkEditSave(Request $request){
    $method = $request->method();
    if($method == "POST"){
        $directory = 'assets/produk';
        $file = $request->file('file');
        $file->move($directory, $file->getClientOriginalName());

        DB::update("UPDATE t_produk SET foto=?, deskripsi=? WHERE id=?", [
            $directory."/". $file->getClientOriginalName(),
            $request->input('deskripsi'),
            $request->input('id')
        ]);
        return redirect('/produk');
    }else{
        return redirect('/produk');
    }
}

```

c. Route

```

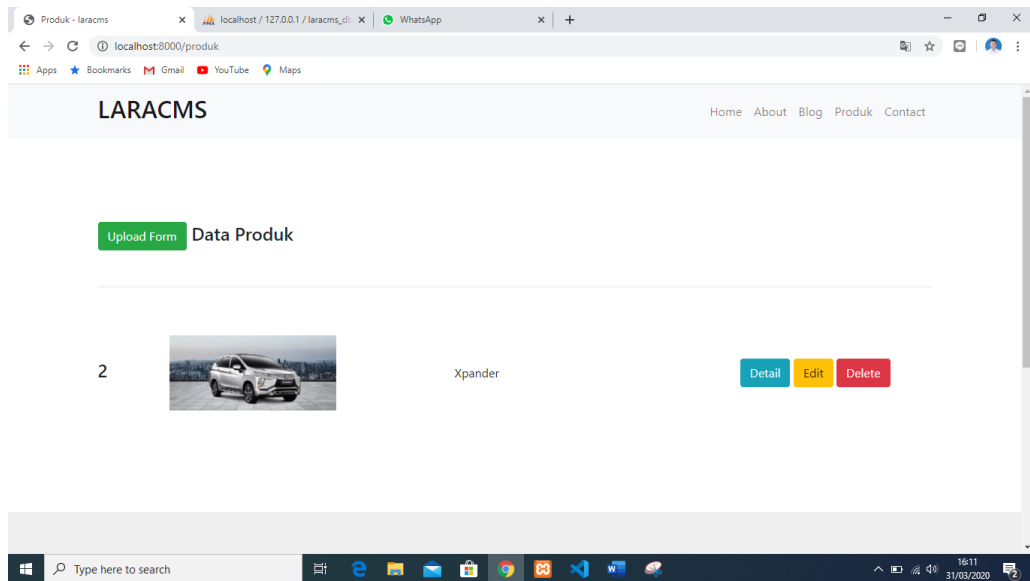

Route::get('/produk/edit/{id}', 'ProdukController@produkEdit');
Route::post('/produk/edit/save', 'ProdukController@produkEditSave');

```

D. Delete

1. Screenshot hasil:

2. Script:

a. Produk_index.blade.php

```
<a class="btn btn-danger" href="{{url('/produk/delete/'.$p->id)}}">Delete</a>
```

b. ProdukController.php

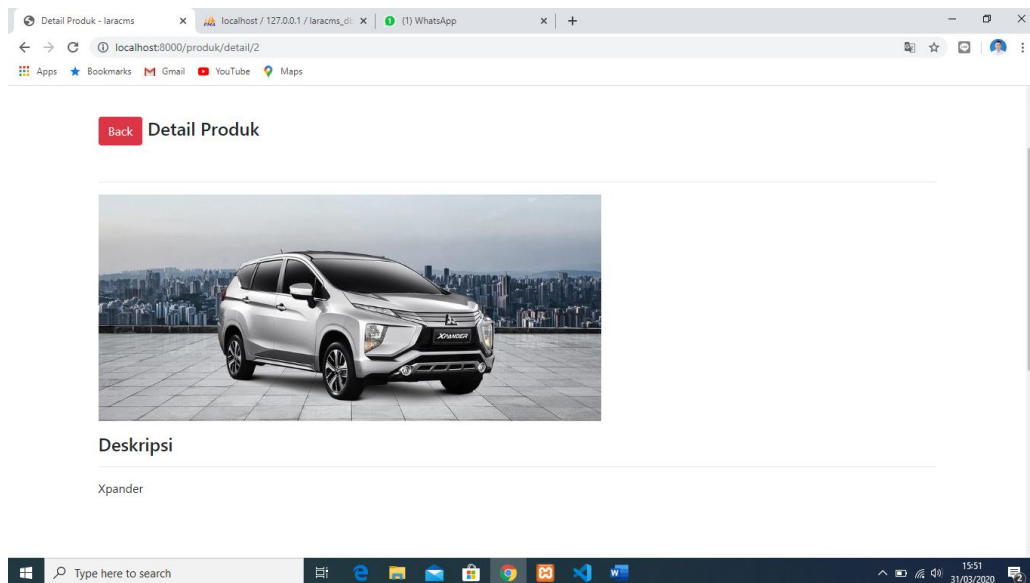

```
public function produkDelete($id){
    DB::delete("DELETE FROM t_produk WHERE id=?", [$id]);
    return redirect('/produk');
}
```

c. Route

```
Route::get('/produk/delete/{id}', 'ProdukController@produkDelete');
```

E. Detail

1. Screenshot hasil:

2. Script:

a. Produk_detail.blade.php

```
<div class="container">
  <div class="row align-items-center half-screen space">
    <div class="col-md-12">
      <h4><a href="{{url('/produk')}}" class="btn btn-danger">Back</a> Detail Produk</h4>
      <br>
      <hr>
    </div>
  </div>
  <div class="container">
    <div class="row">
      <div class="col-md-12"></div>
      <div class="col-md-12 mt-3">
        <h4>Deskripsi</h4><hr><p class="m-0">{{ $produk->deskripsi }}</p>
      </div>
    </div>
  </div>
</div>
```

b. ProdukController.php

```
public function produkDetail($id) {
    $data['produk'] = DB::selectOne("SELECT * FROM t_produk WHERE id=?",
    [$id]);
    $data['title'] = "Detail Produk - laracms";
    return view('produk_detail', $data);
}
```

c. Route

```
Route::get('/produk/detail/{id}', 'ProdukController@produkDetail');
```
